Test Status: Running

Show the most recent data

Powered by GeothermoLab

General Features:

- Unlimited temperature change cycle definition
- Definition of stage time in each cycle
- Repeated temperature change program
- Monitor real-time temperature, deformation data and graphs
- Automatic control of pumps to fill/empty the cell during/wetting tests
- Export data to Excel

GeoThermoLab Features

- 01 Precise control of temperature
- 02 Compatible with many geotechnical engineering tests (Consolidation, Swelling, Permeability, Triaxial, RLT)
- 03 Operate up to 6 temperature control unit at the same time
- 04 Automatic control of water level in consolidation test during wet and dry tests (Filling/Emptying/Refilling)
- 05 Automatic wetting/drying/Freezing test without the requirement to transfer the cell to the oven/freezer

TC UNIT MODEL

Range

GEO-ATC-5	-5 °C to 100°C
GEO-ATC-10	-10°C to 100°C
GEO-ATC-20	-20°C to 100°C
GEO-ATC-40	-40°C to 100°C
GEO-ATCH-40	-40°C to 200°C

Features

- Environmentally friendly CFC-free refrigeration technology.
- Low noise & high quality fully enclosed air-cooled compressor refrigeration
- Fan cooled compressor with overheating, automatic overload protection
- Large-screen LCD display
- Touch screen to operate
- Fuzzy control for automatic control adjustment based on the ambient temperature
- Continuous heating/cooling to reach the desired temperature

Free Swelling Test

Consolidation Test

GEO-ATCH Series

GEO-ATC Series

GEO-ATC

AUTOMATED TEMPERATURE CONTROLLED Add-on

GEO-ATC is an add-on for many civil/geotechnical testing apparatuses to maintain and regulate the temperature at a specified value. This add-on has its own software and controls the temperature of the circulating liquid. The liquid is pumped continuously in a coil around the sample or an external water container.

GEO-ATC is powered with **GeoThermoLAB** to maintain the temperature with the definition of an unlimited number of temperature program patterns.

GEO-ATC can be used as an add-on to the following geotechnical engineering tests:

- Triaxial Test
- Direct shear test
- Permeability test
- Repeated Load Triaxial Test (RLT)
- Unconfined Compressive Strength Test (UCS)

Geothermolab can be tailored to each test based on the requirements of the client.

GeoThermoLAB

GeoThermoLab is a dedicated software to control GEO-ATC and many other sensors and gears like digital dial gauges, solenoid pumps, peristaltic pumps in a single software. As an example, GeoThermoLab can control and read the data of a fully automated wetting/drying swelling test. This includes the following functions:

- Filling the consolidation cell with water in wetting cycle
- Emptying the consolidation cell in drying cycle
- Reading and recording the digital dial gauge
- Defining custom data logging patterns
- Reading/Controlling/Recording temperature of circulating liquid around the sample
- Defining unlimited number of wetting/drying tests with the option of defining the time to rise to the target temperature, time to keep the target temperature
- Defining the level of water in the consolidation cell for testing unsaturated soils
